- Electronic remittance
- Electronic eligibility
- ePrescription *
- Physician website *
- Mobile companion *

Data import modules

- Misys PM
- Medisoft
- Medrium

Highlights:

- Access anywhere
- One time data entry
- Increase productivity
- Top notch security
- Easy to learn & use
- Requires no IT support
- Up to 90% savings

* Release Fall 2009

All-in-one Software

AlloFactor has all clinical front-office and back-office functions integrated into a single package. No longer do you need to fight with getting different systems to work together. No longer does your staff have to duplicate data entry while maintaining those different systems. And no longer do you need to wonder how to plan for the next big technology that is coming along – because alloFactor has you covered.

Increase Staff Productivity

Several manual tasks, including eligibility verification, patient reminders, and remittance posting, are automated now, saving your staff valuable time. Physicians and staff can access patient data across office locations or continue work from home. System defaults, templates, and reuse of data all reduce the data that needs to be keyed in.

Reduce Errors

alloFactor can help scrub your claims using our rules engine, which has thousands of rules prebuilt in. This will reduce your payer rejections and speed up your reimbursement. In addition, our sophisticated rules engine allows you to enter custom rules based on your practice needs to better eliminate manual errors.

Improve Collection Speed

alloFactor automatically prompts your front desk with the co-pay and coinsurance amounts so that the patient responsibility is captured upfront. Over 4000 payers are connected electronically, helping you get paid in as few as 10 days. And easy statement generation allows for systematic statement mailing, greatly facilitating patient payments.

Eliminate IT Personnel

Weekly updates are automatic and eliminate the need for an IT staff. With a user interface and application wizards that are similar to Microsoft Office, alloFactor makes it easy and intuitive for a new

alloFactor PM Solution

user to learn the system. Practices can select predefined receipts and statements or easily customize them to their liking. alloFactor uses 128-bit encryption during transmission, physically isolated data storage, and strong authentication to provide rock solid security without any IT support needed in-house by our clients.

Front Desk & Back Office Management

alloFactor covers all aspect of front desk management, including appointment scheduling, patient registration, check-in and check-out. Daily encounter forms and end-of-day reports help simplify front desk tasks. The back office takes over directly from where front desk left off on insurance and patient billing.

Integrated EMR

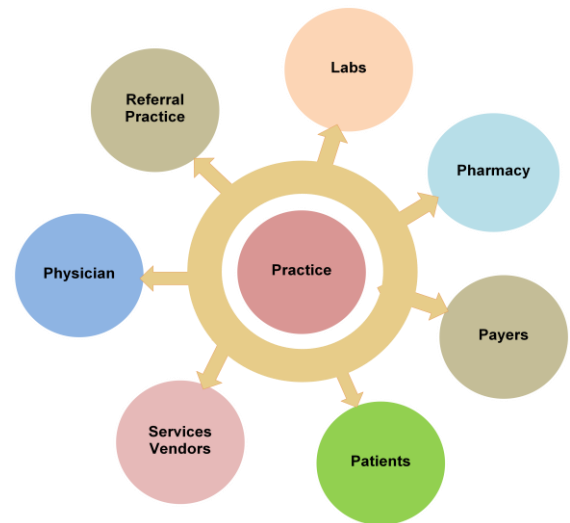

The integrated alloFactor EMR helps physicians easily view previous medical history and rapidly document visit notes through specialized prefilled templates. Interactions with nurses and front desk staff are routed intelligently to enhance performance and reduce errors. Integrated diagnosis and charge capture helps speed up co-insurance at time of visit and helps billing staff recover revenue quicker.

Management Reporting

alloFactor puts information at your finger tips – our real time reports give you a variety of aging, revenue, and collection reports to help monitor and manage your operations. Trend graphs help you quickly understand deviations and take proactive corrective actions.

Dramatic Cost Savings

alloFactor is free for download and use with no user license or location restrictions. Simply install alloFactor on your existing desktops and save on expensive server hardware and IT personnel costs. What you pay alloFactor will be equivalent to what you pay a typical clearinghouse. Our clients typically save over 90% in IT costs by switching to alloFactor.

When you need results, count on alloFactor to deliver
